MEDIA RELEASE

MAS Partners Industry to Develop AI Risk Management Toolkit for the Financial Sector

Singapore, 20 March 2026…The Monetary Authority of Singapore (MAS) today announced the successful conclusion of phase two of Project MindForge[1], which culminates in the publication of an Artificial Intelligence (AI) Risk Management Toolkit for the financial services sector. This toolkit, developed collaboratively by a consortium of 24 leading banks, insurance companies, capital market firms, and other industry partners[2], provides financial institutions with resources for managing AI-related risks across traditional AI, generative AI, and emerging agentic AI technologies.

2 The MindForge AI Risk Management Toolkit features an 'AI Risk Management Operationalisation Handbook' that provides detailed, practical guidance on implementing AI risk management frameworks. This handbook is accompanied by a supplement that features a compilation of AI case studies that document the experiences and lessons learned from financial institutions. These examples offer insights into the challenges, approaches and risk management practices when using AI in different organisational contexts.

3 MAS is presently reviewing responses to an earlier public consultation on a set of Guidelines on AI Risk Management.[3] The Operationalisation Handbook is organised into four sections, which are aligned with MAS' proposed Guidelines:

a. **Scope and oversight** – Establishment of AI governance framework, and clarity of roles and responsibility for AI oversight.
b. **AI risk management** – Identification of AI usage, risk materiality assessment, and AI inventorisation through organisational systems, policies and procedures.
c. **AI lifecycle management** – Implementation of controls covering the entire lifecycle of AI use.
d. **Enablers** – Development of organisational capabilities, infrastructure, and resources to enable ongoing responsible AI use and risk management.

[1] Project MindForge, launched by MAS in mid-2023, aims to strengthen AI risk management for financial institutions deploying AI technologies in their services and operations.
[2] Please see Annex A for the list of consortium members.
[3] For more details of the proposed MAS Guidelines for Artificial Intelligence Risk Management, please refer to https://www.mas.gov.sg/news/media-releases/2025/mas-guidelines-for-artificial-intelligence-risk-management

4 The Operationalisation Handbook will be periodically updated as the use of AI in the industry matures and to reflect MAS' supervisory expectations. To facilitate broader industry adoption of AI risk management practices and solutions, MAS will establish an AI risk management workgroup comprising MindForge consortium members and other industry practitioners under the BuildFin.ai[4] initiative to develop implementation resources, facilitate knowledge sharing, and build capabilities and frameworks for managing risks from newer AI technologies such as agentic AI.

5 Kenneth Gay, Chief FinTech Officer, MAS said, "The development of the MindForge AI Risk Management Toolkit, including the release of the Operationalisation Handbook, marks a major step forward in our journey to ensure the responsible adoption of AI in finance. We are committed to fostering a culture of continuous engagement and strengthening of AI governance and risk management practices across the industry. The BuildFin.ai programme also serves as a foundation for our next phase of collaboration in AI risk management, to bolster the safe adoption of AI across the financial industry."

[4] BuildFin.ai is a new initiative launched by MAS that brings together technology providers, research institutes, and financial institutions to collaboratively tackle complex industry challenges. The initiative aims to create shared resources and solutions that benefit the entire financial ecosystem by pooling expertise and data to address common problems.

Annex A

List of MindForge Consortium Members (Phase Two)

Primary Members:

1) AIA
2) BlackRock (Co-Lead for the "Data & AI" and "Enterprise" Working Groups)
3) Citi
4) DBS Bank (Lead for the "Data & AI" Working Group)
5) Eastspring Investments
6) GIC
7) Great Eastern Life
8) GXS Bank
9) HSBC
10) HSBC Life
11) Income Insurance (Co-Lead for the "Data & AI" Working Group)
12) Julius Baer (Co-Lead for the "Data & AI" Working Group)
13) Manulife
14) Maybank
15) MSIG
16) MUFG Bank
17) Munich Re
18) OCBC
19) Prudential (Co-Lead for the "Risk & Compliance" Working Group)
20) SMBC
21) Standard Chartered (Lead for the "Enterprise" Working Group)
22) State Street
23) UBS
24) United Overseas Bank Limited (Lead for the "Risk & Compliance" Working Group)

Technology and Consulting Partners:

25) Accenture
26) Amazon Web Services
27) Google Cloud
28) Microsoft
29) Nvidia

Association Members:

30) The Association of Banks in Singapore
31) General Insurance Association of Singapore
32) Investment Management Association of Singapore
33) Life Insurance Association Singapore
34) Singapore FinTech Association

Regulatory Authority:

35) Monetary Authority of Singapore

Annex B

Quote Sheet

Marko Milek, Head of Aladdin Engineering APAC, BlackRock, said, "MindForge is valuable because it helps the industry translate responsible AI principles into actionable risk management. BlackRock already had strong foundations in information security, third-party risk, and model management, which we have augmented for new AI risks. And for newer businesses, the MindForge framework is especially practical, supporting AI cataloguing, vendor and enterprise risk integration, and use-case-based risk management as organisations scale."

Sameer Gupta, Chief Analytics Officer, DBS Bank, said, "To fully realise AI's value, governance must be treated as a strategic imperative. This is crucial for preserving customer trust, and is further supported by strong industry collaboration. DBS is pleased to have contributed to shaping the MindForge Operationalisation Handbook and Implementation Examples, which help financial institutions translate responsible AI principles into practical action—enabling innovation while sustaining trust and confidence in the financial system."

David Tan, Chief Data Officer, Income Insurance, said, "In the insurance sector, deepening and safeguarding trust is fundamental. Project MindForge showcases how risks can be mitigated and opportunities in AI and Generative AI can be realised for financial services through close regulatory and industry collaboration, by co-developing best practices and guidance and applying them proportionately across institutions of different scale and maturity. This ensures that we continue to build trust as we advance the safe and responsible adoption of AI and Generative AI."

Andreas Zingg, COO Asia, Julius Baer, said, ""Our participation in MindForge Phase 2 underscores Julius Baer's commitment to advancing responsible AI on a global scale to ensure that AI serves as a catalyst for innovation while upholding the trust our clients place in us with an internationally aligned AI risk management framework."

Ravindaran Nair, Group Chief Technology Risk Officer, Prudential, said, "As AI adoption accelerates, governance must evolve just as quickly. MindForge sets a strong foundation for responsible AI in financial services, and we are proud to contribute to shaping a framework that balances innovation with robust risk management. We see this as a benchmark not only for Singapore, but for markets across the region."

Alvaro Garrido, CIO for Information Security & Data and COO for Technology & Operations, Standard Chartered, said, "As AI becomes increasingly embedded across financial services, strong and practical enterprise level governance is essential to ensure that innovation is deployed responsibly and at scale. MindForge Phase 2 represents the power of cross-industry collaboration in translating principles into actionable guidance that organisations can operationalise. Standard Chartered is proud to have led the enterprise governance workstream and share our experience and expertise in deploying AI across diverse markets. We remain committed to work with regulators and peers to contribute to the continued evolution of the financial sector and ensure AI is used in a responsible, resilient and sustainable manner."

Frankie Phua, Head of Group Risk Management, United Overseas Bank Limited, said, "Project MindForge represents a strong, MAS-led initiative that brings the industry together to co-create AI risk governance guidelines that are practical and proportionate while remaining appropriately risk sensitive. We are proud to collaborate with industry leaders and MAS to ensure that AI technologies are implemented ethically and responsibly, paving the way for a smarter and more inclusive future. This reflects our view that effective governance underpins successful AI adoption, providing the confidence to innovate at pace."
